

Health Education School Questionnaire Content

This is a list of the major topics covered in the school-level health education interview. For more detailed information on the content of the study questionnaires, please visit the project web page at www.rti.org/shpps.

- school health education standards or guidelines
- the provision of health education goals and objectives for teachers of health education
- topics included in health education instruction such as nutrition and dietary behavior, HIV prevention, tobacco use prevention, and violence prevention
- the role of the family in determining the content of health education
- the number of hours of instruction students are required to receive on health topics
- the number of students in courses or classes that cover required health topics
- the length of each health education course or class
- grades given for health education courses or classes
- elective courses or classes that address health topics
- who teaches health topics to students
- credentials that teachers of health education are required to have
- collaboration between teachers of health education and local community agencies on health education projects
- the promotion of community awareness of school health education
